

100% Whole Grain Wheat Bread

2 3/4 cups hot water(bottled, no chlorine!)

1/3 cup oil

1/4 cup agave nectar

2 tablespoons molasses(Can use honey instead)

1 tablespoon salt (sea salt)

7 1/2 cups (max) 100% whole grain wheat flour

2 tablespoons dry active yeast

Directions:

1. Place the first five ingredients in the bowl and mix(a Bosch mixer/kneader works fine). Add 2 cups whole grain wheat flour. Mix, then add dry active yeast. If you're not sure about your yeast, proof it in a little warm water first (to make sure it bubbles). Add 4 cups flour, and mix until the consistency is somewhat even.

2. Then continue to slowly add flour 1/2 cup at a time until the dough quits sticking to the sides of the bowl. It should be tacky to the touch. The trick is to have enough consistency to stand up with the least amount of flour, so the bread will be fluffy. Do not exceed 7 1/2 cups wheat flour. I use 7 cups. You can trade 1 cup wheat flour for 1 cup all purpose white if you wish. Don't over mix, or the bread will be tough. Note: Throw in a tablespoon or so of dough enhancer here if you want a fluffier loaf.

3. When your dough is finished, cover the bowl and let it rise for about 30-45 minutes. The dough will be larger, but it doesn't need to double when using a heavy mixer. Grease two bread pans with nonstick spray. You can also flour the pans to

reduce sticking. Mix again just enough to knock it down at least close to the original size. Drop the dough on a floured surface so you can work the dough and shape it. Preheat oven to 350 degrees F.

4. Roll it in the flour and shape it in your hands to make a nice ball, getting enough flour on it so it isn't sticky. Divide the ball in 1/2 and do it again. Shape the loaves by turning the dough under itself over and over. When the dough is shaped right, the sides and ends will be sealed and all you will see is a nice oblong shaped loaf with smooth sides and top.

5. Drop the loaves in your bread pans and let them rise until almost doubled. Bake for 20 minutes or so (gas oven). When done, turn the bread out of the pan to a rack to cool. You can eat it right away. Don't wrap it until completely cooled. (Condensation will make it soggy) Put in plastic to store on the counter. Enjoy.

If you like fluffy brown bread, this is it. This bread is not heavy like most 100% whole wheat breads.
